

Pioneers in Engineering Sponsorship Packet

2025-2026

Pioneers in Engineering

We believe that no student should be denied a quality STEM education.

Who are we?

Pioneers in Engineering (PiE) is a student run organization at UC Berkeley dedicated to STEM outreach in the Bay Area. Every year, PiE consists of nearly 50 undergrad students who design a new robotics kit and competition for nearly 400 students from across 20 schools in the Bay Area.

PiE's mission is to ensure that every student gets the opportunity to pursue STEM, regardless of background.

Our Program

Every semester, PiE creates the robotics competition rules, field, and software, all from scratch, ensuring that we provide an immersive learning experience for all students from the 20 participating schools. We also recruit UC Berkeley students to help with this process through our subteams (electrical, software, business operations, etc.) and host a class for the general student population to train them to be mentors for our high school participants during the competition season. Our program develops the passion for STEM for our students while also allowing UC Berkeley students to give back to the community.

Our Fall '25 Competition!

Our Students

Our efforts center on enabling underrepresented students, especially in lower income areas, to learn more about STEM through mentorship and friendly competitions. Many of our students lack the educational and financial means to access opportunities in STEM at their schools, let alone to pursue higher education in these areas. This translates into an underrepresentation of these students, who are usually first-generation, low-income, and students of color, in one of the fastest growing fields.

87%

Of our students are historically underrepresented*

70%

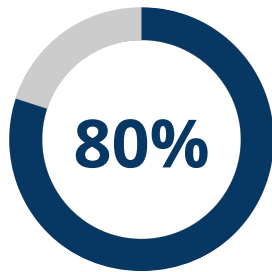

Of our students qualify for free or reduced lunch

60%

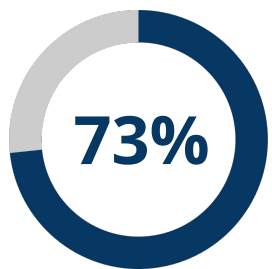

Of our students are first generation students

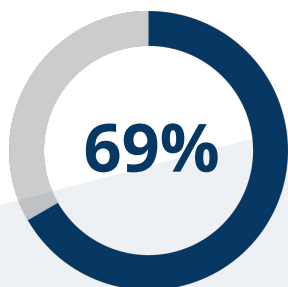

Our Impact

Of our students became more interested in STEM after PiE

Of our students' became more interested in pursuing higher education

Of our students claimed to be more confident in themselves after competing

Our Staff

Software Teams

We have 5 software teams in PIE. One team creates an IDE for participants by creating a friendly UI and a back-end that can communicate with the robot. The Runtime team works on firmware to establish communication between the robot's controller, student code, competition field, and other devices. Staff also writes software to manage the field and use sensors to update scoring, matches, and timing autonomously. Another team automates the process of installing our firmware onto the students' Raspberry Pi's, as well as conducting thorough testing. Finally, we have some staff working on web development to maintain the website.

Our Staff

Electrical Teams

Our 2 electrical teams of 15 focus on creating electrical components needed for students to build the robot, such as motor controllers, various sensors, and the power distribution board. Staff learns about creating PCB designs with Eagle, writing firmware, and producing boards with surface mount soldering and reflow ovens.

Mechanical Teams

We have one mechanical team of 15 that focuses on designing and manufacturing parts for the robot kits. Staff learns to use SolidWorks, Fusion 360, CAD, and even machine shop tools.

Our Staff

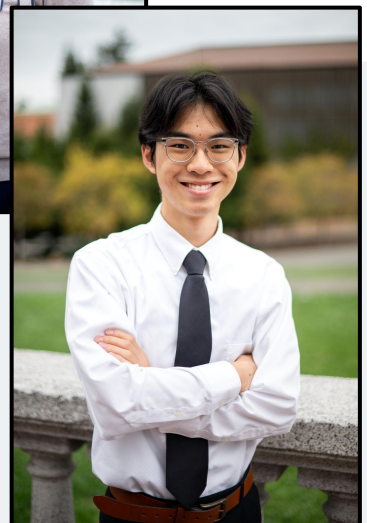

Education Teams

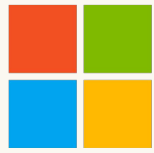

Our education team focuses on overseeing a curriculum for the competition that will keep students engaged and leading a class to prepare UC Berkeley students for mentoring. Staff administers and plans other projects such as PRB and Trebuchet

Our Budget

Our staff is dedicated to reducing the cost of the engineering competitions for students, so only 5% of our budget is used for operational overhead and 95% of our budget directly serves PiE students as outlined below.

Kit Development	\$2,600
Designing and prototyping robotics kits	
Kit Materials	\$33,000
Mechanical and electrical components and manufacturing	
Robotics Competition	\$8,300
Venue fees and the game field	
Outreach Events	\$4,515
Materials for workshops, lessons, and transportation costs	
Miscellaneous	\$2,300
Printing, staff recruitment, operating expenses	
\$50,715	

Sponsorship Tiers

Benefits	Any Amount (\$0-\$500)	Bronze (\$1000)	Silver (\$1500)	Gold (\$3000)	Title (\$5,000+)
Tax-deductible donation	●	●	●	●	●
Name on PiE website	●	●	●	●	●
Logo on banners		●	●	●	●
1 <i>internal</i> info-session event*		●	●	●	●
1 <i>external</i> info-session event**			●	●	●
Access to PiE resume book			●	●	●
2 <i>external</i> info-session events**				●	●
Logo displayed on field parameter				●	●
Competition award named after company					●
Company name as Title Sponsor on PiE Alumni Scholarship					●

**internal* info-session allows your company to present to all PiE staff members during our general member meetings

***external* info-sessions include provided food, a room, heavy and inclusive marketing to students across campus, and parking passes

Other PiE Events

The PiE Alumni Scholarship

The PiE scholarship Committee awards a total of \$2400 to high school seniors. A \$2000 award is given to one winner while four finalists are awarded with \$100. Winners are chosen using a holistic process by our alumni panel

PiE on the Road in a Box (PRB)

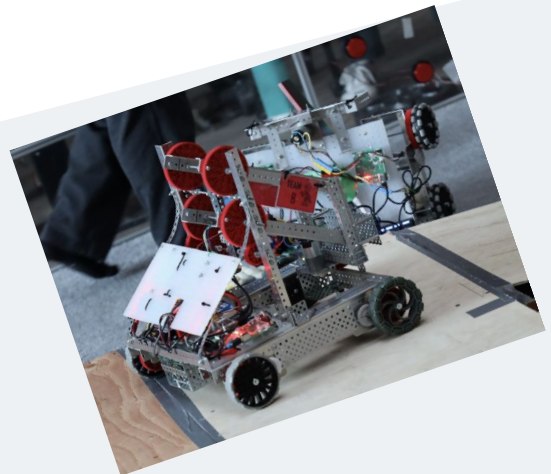

Beyond our spring robotics competition, we teach workshops in the fall that focus on hands-on engineering topics, such as gear ratios, kinematics, and circuits. Called PiE on the Road, we travel to the high schools and give them custom, mini robot kits to supplement the material we teach, allowing students to further explore their passion for robotics

Other PiE Events

Fall Competition

We host a reboot of last Spring's robotics competition during the Fall, with improved robot design and strategy. Fall Competition is also a chance for schools to recruit to new students and prepare them for the main competition during the spring semester.
